About Me

My background as a Safety System Engineer Assistant developed my expertise in data management, safety compliance, and process improvement. To extend these capabilities through technology, I completed RevoU's Full-Stack Software Engineering Bootcamp and independently developed an internal ERM (Emergency Response Management) System Information to digitize OHS (Occupational Health and Safety) workflows aligned with ISO 45001, ISO 31000, and Indonesia's SMK3 framework (PP No. 50 of 2012). I specialize in backend development using TypeScript, NestJS, and PostgreSQL, with strengths in REST API development, database design, and business logic implementation, complemented by experience in React and Next.js. I aim to deepen my backend engineering expertise and build scalable, maintainable, and dependable systems.

Working Experiences

Assistant Safety Engineer | PT. QMB New Energy Materials **Dec 2022 - Present**

- Conducted internal SMK3 audits across 65 divisions and workshops, identifying 1000+ findings and evaluating compliance against PP No. 50/2012, strengthening the company's audit readiness.
- Prepared corrective action reports and consulted department owners on audit follow-up, achieving a 91% completion rate, ensuring findings were closed on time rather than left open.
- Delivered safety induction and OHS training to new employees and contractors as a BNSP-certified trainer (Level IV), reaching 1,500+ employees (about 40 sessions per year), building safety awareness and consistent safe work practices.
- Accompanied external audits and government inspections as auditee, preparing documentation and evidence and reviewing permits to work, maintaining legal compliance and safe contractor operations.

Project Experiences

ERM System Information **Oct 2026 - Present**

A full-stack Occupational Health and Safety (OHS) management system designed to digitize industrial safety operations and compliance workflows. Independently developed the system using NestJS, TypeScript, PostgreSQL, and Prisma, implementing features such as hazard reporting, risk assessment, approval workflows aligned with ISO 45001, ISO 31000, and Indonesia's SMK3 framework (PP No. 50 of 2012), equipment inspections, QR-based safety induction, incident investigation, and automated notifications. Integrated authentication, role-based access control, scheduled reminders, and audit logging to improve safety monitoring, compliance tracking, and operational accountability.

FinTrack (Personal Finance Management System) **Aug 2026**

A full-stack personal finance management application designed to help users manage income, expenses, budgets, and savings goals. Independently developed the application using Next.js, React, NestJS, TypeScript, PostgreSQL, and Prisma, building features such as financial analytics, multi-account management, automated balance recalculation, and monthly reports. Implemented JWT authentication, role-based access control (RBAC), and secure API endpoints to support reliable financial data management and informed decision-making.

RevoFun **April - May 2026**
A browser-based Mandarin learning platform designed to make vocabulary and number practice interactive through four educational games. Independently developed the platform using HTML5, Tailwind CSS, and vanilla JavaScript, creating Memory Match, HSK-level Vocabulary Quiz, Number Guess, and Mandarin Catcher. Implemented responsive layouts, interactive game logic, touch-friendly controls, and mobile landscape support to deliver an accessible learning experience across devices.

Education

RevoU **Feb 2026 - Sep 2026**
Software Engineering Bootcamp, Full Stack
Completed a Full-Stack Software Engineering bootcamp focused on end-to-end web application development, covering both frontend and backend engineering. Built interactive user interfaces with React, developed server-side applications and RESTful APIs with Node.js, and designed and managed relational databases using PostgreSQL and Prisma ORM. Gained practical experience in API testing, frontend-backend integration, Git version control, and the software development life cycle (SDLC).
Final Project : HAAMI (Hazard Analysis & Awareness Management Integrated)
A comprehensive full-stack Occupational Health and Safety (OHS) management platform specifically built for SMK3 regulatory compliance, independently architected and developed using Next.js, NestJS, TypeScript, PostgreSQL, and Prisma. The platform integrates core safety management modules including hazard reporting, risk assessment matrices, incident investigation workflows, and real-time analytical safety dashboards. Designed with enterprise-grade reliability, the system features robust role-based authentication, multi-level approval workflows, and automated notification triggers to streamline workplace safety operations, audit readiness, and continuous compliance monitoring across industrial facilities.

Hasanuddin University, Makassar, Indonesia **Jun 2005 - Feb 2011**
Bachelor of Industrial Engineering.
GPA : 3.14/4.00
Thesis : Analysis of Gypsum Inventory Control in Enhancing Inventory Cost Efficiency at PT. Semen Tonasa

Skills

Technical Skills:
- Backend Framework: NestJS, Node.js, REST API design
- Programming Languages: JavaScript, TypeScript
- Database Management: PostgreSQL (Supabase), MongoDB
- API dan Testing Tools: Postman, Swagger (OpenAPI)
- Cloud and Deployment: Render, Railway, Vercel, Netlify, self-hosted server
- Version Control System: Git, GitHub
- Frontend Framework: NextJS, React
- Package Management : npm, bun

Soft Skils: Ownership, Accountability, Analytical, Problem-Solving, Adaptability, and Fast Learning

Certifications

Full Stack Software Engineering, Issued by RevoU **Nov 2026**
